

ACR Fuller Group brings welding to Edmonton; Obtains ABSA certification

Sudbury, Ontario. September [●], 2019 – ACR Fuller Group, a Canadian based supplier of abrasion solutions for processing equipment all over the world, is pleased to announce the opening of the newest pipe welding plant just outside of Edmonton, in Nisku AB, and the related certification of such facilities by the provincially regulated Alberta Pressure Equipment Safety Authority (more commonly know as ABSA).

ACR Fuller Group President, Jeff Fuller, commented, “This was the next natural step in expanding our welding capability. ACR Fuller Group already boasts the most advance pipe welding facility in North America at its plant in Sudbury, ON, and wanted to bring the same expertise closer to western customers.”

Company Chief Operating Officer, Dan Denault, explained, “This is a really good thing for our oils sands customers in and around Fort McMurray, as well as our mining customers in BC and Canada’s north. It gives us the ability to fabricate and rubber line pipe at the same facility, saving time and big logistical costs for our customers.”

The plant is certified through ABSA to weld pressure piping in compliance with ASMA B31.1 and B31.3. The plant also welds in conformance with B31.4.
